

# Java Web Fundamentals

Servlets are the foundation of Java Web Fundamentals

Servlets live in a Servlet Container

The Servlet Container converts HTTP requests to Java and calls methods in the Servlet

The Servlet returns a response that the Servlet Container converts to a HTTP response

# Servlet

Handles HTTP requests in doGet and doPost methods

Handles requests from multiple users at the same time

Always running, ready to respond to requests

Are stateless by default

(doesn't remember the last request)

Often uses templates to generate HTML

# Demo and exercises

Let's do a demo and then exercises!
